

## **ABSTRACT**

5 A key rack with a unique stacking system is provided. The key rack has grooves and/or curves provided thereon such that the grooves and or curves of one key rack fit into the grooves and/or curves provided on another rack thereby allowing one rack to combine with a second rack to form a larger key rack system. The key rack has a tier system of hooks that allow for one tier of hooks to be horizontally and vertically offset from a second tier of hooks.
